PROJECT

- Automatic irrigation system**
An automatic irrigation system is a method of providing controlled amounts of water to plants or crops through an automated setup. It helps in delivering water efficiently. saving both time and water, while ensuring optimal growth for plants. The system generally consists of components like sensors, controllers, sprinklers, and valves
- efficient parking reservation system**
An efficient parking reservation system allows users to reserve parking spaces in advance, ensuring smooth and convenient access to parking spots, especially in crowded or high-demand areas. The system typically involves an online platform. App that enables users to search for available parking spaces, book them, and pay ahead of time.Developed and optimized an efficient parking reservation. System, enabling users to reserve parking spaces in advance through a mobile app. Integrated real-time availability, automated booking, and payment systems. Resulting in improved user experience and a 30% increase in space utilization."Integrated payment gateways, real-time availability tracking. Automated confirmations, reducing parking.
